

**Smart data and document delivery**

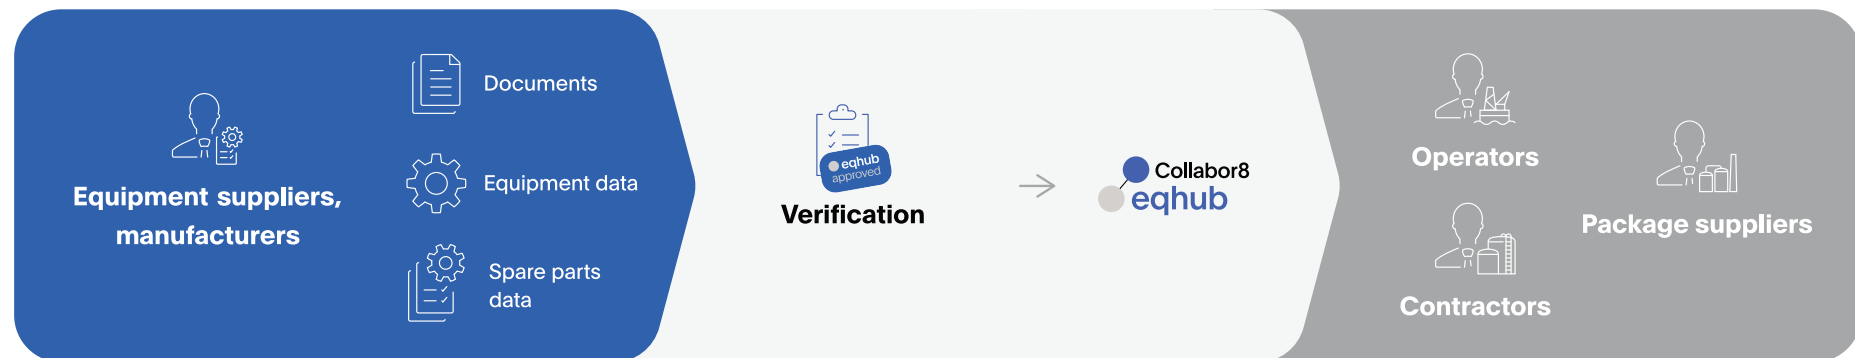

## All operators on the NCS are intensifying their use of EqHub

Common documentation requirements from the operators are contributing to increased efficiency and cost savings in the industry.

Applying uniform standards for sharing and reusing information through the EqHub service will help to simplify and enhance efficiency in the expensive and time-consuming process of handling documentation on the NCS.

## The EqHub digital service – sustainable future of data quality and document sharing

- Cloud-based solution to help manage standardised data and documentation across operator companies on the NCS
- Access to pre-qualified, classified and quality-assured information
- One central technical information repository for standard equipment in accordance with ISO 15926
- Register equipment just once for all future reuse
- Cuts vendor time spent on document handling related to project deliveries

Data entry stage based on the previously specified requirements by operators

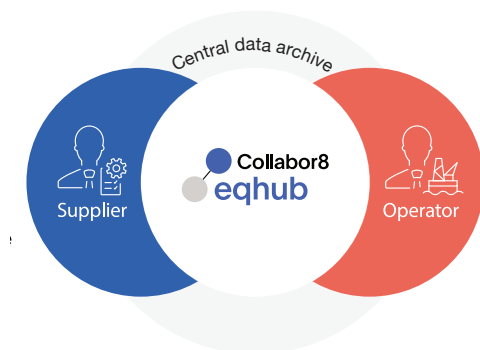

Verification stage, compliance check.

Making data available for all parties involved

Usage and delivery stage. Correct equipment information is connected to PO/TAG

The communication and collaboration will be simplified by having one central data archive available and accessible at all times.

-  Improved work efficiency
-  Optimised inventories
-  Shorter data delivery schedules
-  Reduced documentation volumes
-  Full regulatory compliance
-  Mitigated risks
-  Saved time and resources
