

What is Eqhub

Direct collaboration:
all operators use the same standards and requirements for the NCS, which are predefined for the suppliers in EqHub correspondingly

Central data archive:
suppliers enter equipment information directly to EqHub; the data are always available for operators

Working efficiency:
a single place for delivering information based on the predefined flow and simplified process of retrieving data for further use

Challenge

Entering the Norwegian oil and gas market, **suppliers** face a number of challenges

- ❗ ever-growing number of requirements & standards
- ❗ strict regulatory environment
- ❗ much efforts spent on the documents preparation
- ❗ long time to market
- ❗ delays in equipment delivery

Solution

With EqHub suppliers deliver information **only once**. The **requirements** are clearly stated by operators.

Benefit

- ✓ Personal catalogue with stored documents and drawings.
- ✓ Increased number of completed orders and shorter delivery time
- ✓ The requirements are clearly outlined for each equipment by operators
- ✓ Compliance with the latest standards / regulations
- ✓ Information is verified and data are complete
- ✓ Positive effect on the suppliers' image within the industry
