

What is EqHub

Industry initiative for standardization, gathering, and delivery of equipment data and documentation.

EqHub is owned, operated by the Offshore Norge on behalf of all operators across the NCS.

The EqHub serves as a single and controlled source of vendor documentation for all parties involved.

For whom

Equipment suppliers / manufacturers and

operators

Supplier data processing

Current approach

Different requirements for document setups are challenging to follow and result in multiple data silos

VS

EqHub approach

Digitalisation and formulation of the single documentation and data source will result in:

Postponed delivery and project delay

Human errors and data inconsistency

Lost documentation

Fragmented data

Increased equipment overlap

Delayed startup / operations

Improved work efficiency

Optimized inventories

Shortened data delivery schedules

Reduced documentation volumes

Achieved regulatory compliance

Mitigated risks

Saved time and resources

Yearly savings thanks to EqHub

Improved efficiencies: operations, projects

500 MNOK

Unnecessary stock in warehouses:

3 BNOK

Reduced master data establishment

200 MNOK

Part of

Industry 4.0

EqHub: be data smart
