

L2S - API

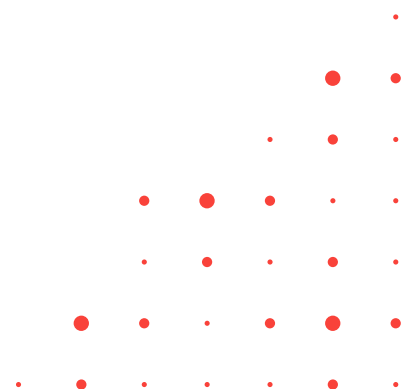

Workshop

Agenda

1. Current status
2. Identified missing functions
3. Additional functions and roadmap
4. Q&A

Current Status

- Went PROD for 6 weeks ago. Identified some issues. Fixed the most critical. Continuously fixing the remaining.
- 16 REST API functions
- Company specific integration accounts for TEST and PROD
- Swagger
 - L2S TEST: <https://apis-test-l2s.collabor8.no/api/Swagger/UI>
 - L2S PROD: <https://apis-l2s.collabor8.no/api/Swagger/UI>
- Current issues:
 - Upload files above a certain size
 - Upload 1 GB files

Identified missing features and functions

- **GetCompanyMetadata** – Returns a JSON file

- Current options: permissions, date
- Requested improvements
 - Find changes in specific folder
Add an optional parameter “**serverRelativeFolderPath**”. If specified, the returned JSON will only return data from that folder and subfolders.
 - Include document version details
Add an optional parameter “**includeVersionDetails**”. If set to true, then the returned JSON will also include details about available versions for this document: version number and version datetime.

- **Download Committee list**

- Return a Excel/CSV – Alternative: JSON???

- **Download Super User list**

- Return a Excel/CSV – Alternative: JSON???

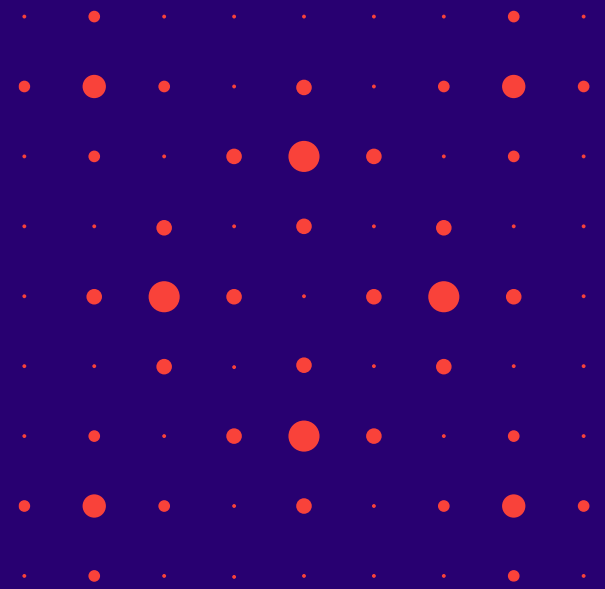

Identified missing features and functions

- Download documents in folder
 - Parameter: serverRelativeFolderPath, date
 - The content includes documents, subfolders and content inside subfolders. The content will be returned as a zip archive. “date” is used to specify if items modified since specified date should be returned. Metadata about the content will not be included as this is handled by “GetCompanyMetadata”.
- Get metadata about documents with latest comment
 - Parameter: date
 - The purpose of this new API function is to get documents with comments newer than a specific date.
 - GetCompanyMetadata with argument to get changes, doesn’t return documents with new comments – since a new comment won’t update the document with a new version or new modified date.
 - The returned JSON will be the same format as the JSON returned from GetCompanyMetadata.

Additional functions & roadmap

- Collect input on which company API requirements are missing – MS Form.
- Assess the input, group and merge requirements into suggested improvements.
- Arrange for “L2S Focus and Improvement Group” workshop with agenda to
 - Review suggested improvement
 - Prioritize improvements as input for roadmap
- Offshore Norge and Tietoevry will create roadmap.
- “L2S Focus and Improvement Group” will review the roadmap and approve it.

Q&A

Thank you
